

CHEMAXIA AND PART OF ITS PARTNERS COATINGS CUSTOMERS' DAYS OF MAY 7th AND 8th

On May 7 and 8, Chemaxia and part of its Partners, according to a custom set up from the beginning of the year 2014, have met a large number of Customers and People involved in the coating market.

The first one at "CASE PATAN" home of Claudio Rossi, Chemaxia Agent, surrounded by a splendid natural Ligurian interland frame and with the welcome of the exquisite hospitality of the Family, while the second at Segrate in the very welcoming oasis where Sporting Club Milano2 seats.

The common denominator for both the events has been the well balance blend of professional and technical competences of the invited attendees, of the speakers and their deep technical knowledge, the news of the subjects and, after many lively presentations, a round table discussion featured by a very informal, open and fluid dialogue.

Franco Franzetti e Fulvio Pagnozzi gave in a brief (very appreciated) fluid way the short, but very intense, life of Chemaxia and its growth in few years, the Principals represented, their continuous growth and their products/applications and pointed to future concrete further developments.

The attendees have been informed of the new business relationship with the Company Cantarella & Molteni for the color cards and fanders, announcing in advance of a possible "open day" visit of their plants in the forthcoming months.

The Company Woodchem B.V. has been introduced by the Founder Dr. Cor Klaver who presented the Vinkocide biocide portfolio, their applications and the services and technical assistance that the Company is able to give.

Dr. Antonio Conto, Managing Manager of the Company ChemSafe S.r.L., has introduced a very updated and sensible analysis concerning the authorization of the use of biocide products in the light of the new regulations and of the services they can offer to cover (meet) Reach and CLP too.

TS&D Responsibles for Europe Laura Ham and Massimo Longoni of EPS Engineered Polymer Solution B.V. and CCA Color Corporation of America Responsible made the up to dated presentation of Dyflex resins for building and nati corrosion.

To the presents has been asked a (written) opinion and thanks to this survey is possible to declare that the success of both events has been so good and rewarding, above all expectations, that we plan a new one on October 8 for the Customers of Veneto, Emilia-Romagna and center of Italy regions.
